Subject: Toxic?

Dear Director of EPA Tribal Affairs,

You must know what is going on at Standing Rock Water Protector Camp in North Dakota. They have sprayed innocent people with water, which have chemicals in it. also spraying with gasses. Besides the oil company wanting to put a pipeline in the river, which will contaminate our drinking the water, they are now putting toxins into the air and land by their spraying and more importantly, trying to kill innocent people with these toxic gasses. Your dept. should go out there and test what chemicals they are using ASAP, before our people, land and air becomes more polluted, I beg you to take a stance on these issues.

Thank you,
Olivia Dancel
